

Everything has Changed

Collaborative Culture

At Seven Valleys New Tech Academy, there are no desks in rows and no solitary bookwork. Students take advantage of an atmosphere that matches their learning styles and needs.

They work, side by side with their teachers and classmates gathering and sharing necessary information to solve real-world problems.

Students learn to work successfully with others while taking personal responsibility for becoming an effective team member.

They will work side by side with their teachers and classmates...
...to solve real-world problems.

One to the World Technology

Students at Seven Valleys New Tech Academy have the world at their fingertips. Every student has their own personal learning device.

Technology is at the core of learning for all students. They go beyond the textbook to examine topics in greater detail and take personal responsibility for their education.

They have access to state-of-the-art technology to discover the world that surrounds them.

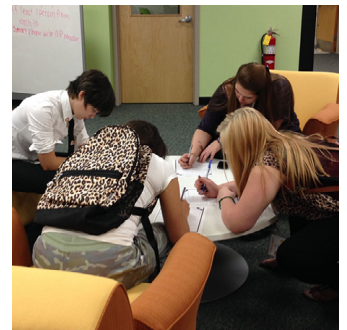

Project-Based Learning

Project-based learning allows students to master the material in their classes in a real-world setting.

Students complete common-core-aligned projects throughout the year focusing on collaboration, problem solving and critical thinking skills.

As a team they research a problem and create a presentation that they deliver to an audience of business and community members.

...focusing on collaboration, problem solving and critical thinking skills.

Application Process

Students are invited to apply through their school administrator or school counselor. Once applications are reviewed, all potential candidates and their guardians will have an interview with staff from Seven Valleys New Tech Academy. Enrollment is limited.

Students selected to enroll in Seven Valleys New Tech Academy are invited to attend an orientation prior to the start of the school year.
