

Curriculum Material Kits

The OCM BOCES Science Curriculum Materials CoSer provides science curriculum materials and professional development around science and the use of the materials for teachers. This CoSer uses units from the Smithsonian Science Education Center's "Science for the Classroom" and "Science and Technology Concepts" programs. These programs are aligned to the New York State Learning Standards in each grade level, K-8.

Each section in the program is provided with enough materials to run interactive, hands-on investigations for up to 32 students. The best part? We take care of the storage, refurbishment, and transportation of the materials. When they arrive at your school, your teachers can start teaching right away!

All units in the program come with online resources, texts to support literacy, student investigation guides, and a teacher guide. Class rostering options are available using Clever, ClassLink, and Google.

Elementary Curriculum Material Kits

Full-Service K-6 Science Kits provide class science kits, teacher training & technical support.

Kits provide a classroom with up to 42 weeks of science education.

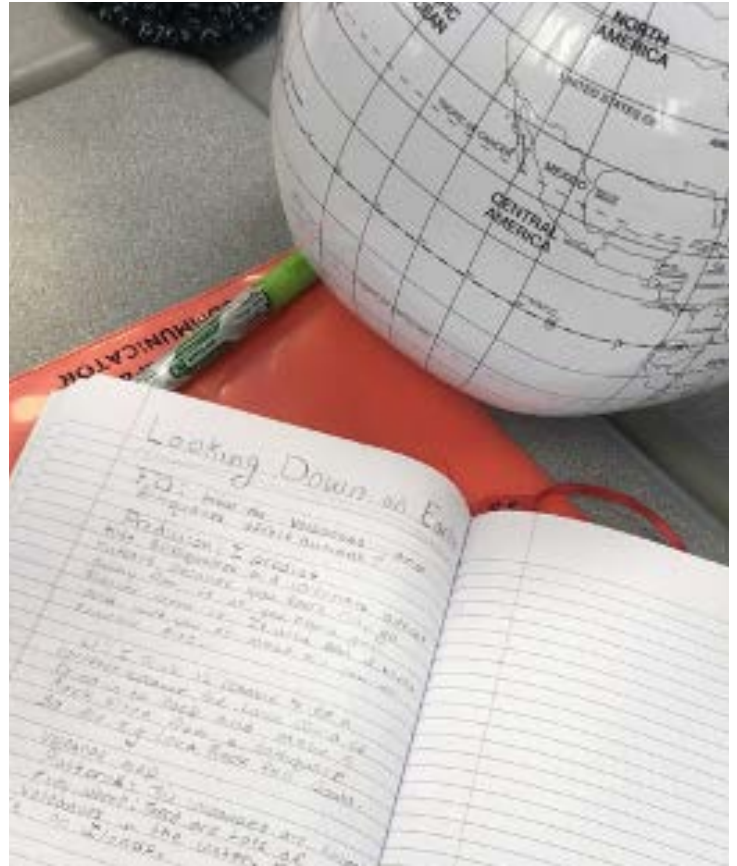

Middle Level Curriculum Material Kits

Full-Service Middle Level Science Kits provide class science kits, teacher training & technical support.

Kits provide a classroom with up to 42 weeks of science education.

The programs provide

- Curriculum guides
- Kit supplies
- Kit delivery & pickup and teacher training

Cost

- **Elementary Program** (Grades K-6): \$1,300 per section
- **Middle School Program** (Grades 7 & 8): \$4,500 per section in the first year, \$1,800 per section in subsequent years
- **Refurbishment-only option:** \$1,800 per section
- **Student Rostering:** \$120 per school building
